

**S-type**

**HB**

## MULTILAYER HIGH BARRIER HEATSHRINKABLE BAGS

S-type **HB** are multilayer high barrier heatshrinkable bags produced by company Spektar.

Various **HB** subtypes are carefully designed to cover wide range of applications, especially in meat, fish and fermented cheese industry.

S-type **HB** bags are offering high barrier to gases, good water vapour barrier and exceptional absorption of UV light. These features will significantly prolong the shelf life of packed product while keeping it fresh and preventing loss of aroma and weight.

Excellent mechanical performance and seal integrity of all **HB** subtypes guarantee low leakage rates throughout the whole production and supply/retail chain.

Outstanding gloss and transparency of **HB** bags will make packed product extremely attractive.

**HB** bags contain no potentially hazardous PVDC, which makes them ecologically acceptable.

### INSTRUCTIONS FOR USE:

- Place product in bag taking care not to contaminate the part of the bag that will be sealed
- Vacuum suction the bag until reaching the lowest possible pressure level, while the operation of the vacuum machine should be adjusted to be able to separate any remaining surplus material.
- Submerge the bag into water heated to a temperature of 88-95°C for a period of 1-2 seconds in order to achieve optimal shrink performance. For sensitive products apply lower temperature.

### STORAGE:

- Recommended conditions: warehouse temperature 15-25°C, relative humidity maximum 65%.
- Bags should be stored in original package without exposure to direct sunlight and environmental conditions.
- Storage time: up to 12 months after production date, if stored properly.

**HB** bags are approved for direct food contact in accordance with regulations of Republic of Serbia, EU and EFTA countries. Upon customer's request, Spektar D.O.O. will provide a copy of valid certificate for the market of interest. The given information in Technical Data Sheet is to our knowledge true and accurate and offered for user's consideration, investigation and verification. TDS represent typical data offered as a guide for choosing most suitable **HB** product and does not imply or guarantee performance. Since the particular uses and actual conditions of use of our products are beyond our control, establishing satisfactory performance of our product for intended application is the customer's sole responsibility. Changes due to technical improvements are possible. Spektar D.O.O. will not take responsibility for diminished performance in case of inappropriate storage.
